

MERCATOR ikuü

zigbee pairing instructions

If you require any assistance, you can speak to our customer service team directly via phone on **1300 552 255 (AU)** or **0800 003 329 (NZ)**, or via email at **customer@mercator.com.au**

You can also visit **ikuu.com.au** to access troubleshooting guides and advice on how to get the most from your Mercator Ikuü products, such as guides on scenes and automation.

1 Set Up the App

1. Download the Mercator Ikuü app.
2. Tap 'create new account' or 'log in to account'.
3. Follow the in-app prompts and tap 'OK'.

2 Connecting a Product to the Hub

1. To pair a Mercator Ikuü Zigbee product to your hub, press the button on the side of the hub once (do not hold). The LED light will blink slowly.
2. Activate your product's pairing mode by following the 'Connect to the App' instructions below. Once in pairing mode, the hub will automatically detect the product and add it to the app.

3 Connect to the App

To connect your product to the app, you must first enter pairing mode. All Mercator Ikuü Zigbee products require a Mercator Ikuü Zigbee hub.

Activate Pairing Mode

1. Remove the metal mounting plate from the back of the device, and then pull out the battery insulation tag.
2. Using the provided reset pin, press and hold the reset button for 5 seconds until the indicator light starts flashing.

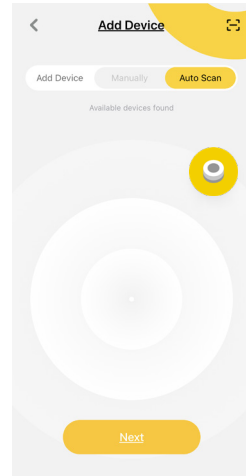

3 Connect to the App (Cont.)

Pairing Your Product:

If the product isn't paired after completing the steps in 'Connecting a Product to the Hub', follow the steps below. Make sure your product is still in pairing mode.

1. Open the Mercator Ikuü app. Make sure your hub's Zigbee LED isn't flashing. If it is flashing, press the button on the side once. It should now stop flashing.
2. Tap + > Add Device > Auto Scan. The discovery process will begin.

4 Creating Triggers

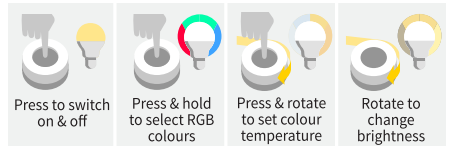

Use your wireless dimmer as a convenient trigger for other Mercator Ikuü products.

Your device can be used as a lighting dimmer or a scene switch. When selecting the device in the app for the first time, it will be in lighting dimmer mode. You can change the mode at any time by pressing the switch three times quickly.

If you are only controlling Zigbee lighting products, use the product as a lighting dimmer for the best experience, otherwise, select the scene switch mode.

Lighting Dimmer:

1. Tap the '+' icon and press the wireless dimmer as prompted.
2. Select the lights that you would like to control from the list. If you are on the light selection screen for a long time, press the wireless dimmer again before pressing 'Save'.
3. You can adjust the device list at any time by tapping on the '+' icon.

4 Creating Triggers (Cont.)

Scene Switch:

If your switch is in lighting dimmer mode, press it three times quickly to change modes.

1. Select the trigger you would like to set up.
2. Tap 'activate device' then choose your desired device action(s), and tap 'next'.
3. Adjust the name of your automation then select 'save'.

For more detailed instructions and ideas on how to get the most value from your wireless dimmer, scan the QR code.

5 Installation

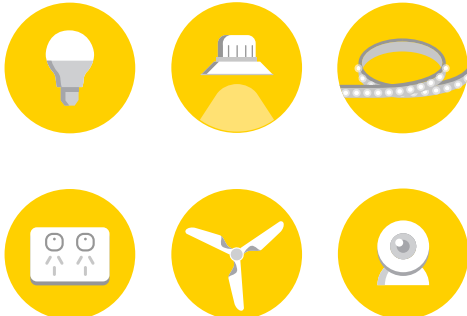

Your wireless dimmer can be used as a portable product without mounting, or can be installed on any surface.

To install on a magnetic surface, simply remove the metal mounting plate from the back of the device before placing on a suitable surface.

To install on a non-magnetic surface, use the provided double-sided tape to attach the metal plate to a surface. The product should not be installed directly without using the mounting plate, as access to the back surface is required to replace batteries or reset the device.

This product contains a LITHIUM COIN type battery
WARNING! Please ensure the coin battery is kept OUT OF REACH OF CHILDREN.
